CarbonLite Technical Review Package

KACH CANADA LTD.

Report Information

Prepared for review as part of a pilot emissions data readiness and reporting workflow. This draft export is not approved, verified, certified, o

Reporting Boundary

Water is tracked as an operational metric and excluded from GHG emissions totals unless a reviewed water emission factor is provided.

Calculation Quality Summary

Requiring Review

of calculated GHG emissions total. No imported activity records require review.

Threshold Reference

Unresolved source rows have not been imported into ActivityData and are not counted as imported activity records requiring review.

Methodology and Limitations

ort methods used to create the activity records included in this pilot report. Detailed record-level source

es contributing the largest share of current estimated emissions. Hotspot analysis helps identify

Regulatory threshold screening is not yet configured with reviewed source provenance for this jurisdiction.

Reviewed regulatory source provenance is required before threshold screening.

Threshold screening only. This does not constitute regulatory compliance advice.

CarbonLite uses one six-stage workflow: Define Reporting Boundary, Collect & Upload Source Data, Review & Resolve Data Issues, Valida

uiring review, tracked-only metrics, missing factors, inv

Emissions are calculated from imported or manually entered activity data and configured emission factors. CarbonLite applies factor matchin

Records without valid factors, units, quantities, dates, or required jurisdiction are excluded from emissions totals and listed as records requir

Source documents, source references, and factor metadata should be reviewed before using report outputs for internal, consultant, or extern

This report was generated using CarbonLite Pilot Demo v0.1 for emissions data readiness and workflow review purposes only. It is not a cer

Top Emissions Hotspot: Electricity

Electricity contributes 89.64% of calculated emissions. Consider this category for reduction planning because it represents a large share

Electricity and Business Travel - Accommodation together represent 100% of calculated emissions.
