CarbonLite Technical Review Package

KACH CANADA LTD.

Report Information

Prepared for review as part of a pilot emissions data readiness and reporting workflow. This draft export is not approved, verified, certified, or

Reporting Boundary

Detailed tracked records without valid factors, units, quantities, dates, or required jurisdiction are excluded from emissions totals and listed as records requiring review. Detailed tracked records with valid factors, units, quantities, dates, and jurisdiction are included in emissions totals. Assumptions and limitations are provided.

Calculation Quality Summary

Tracked records included in emissions total: 1

Tracked records excluded from emissions total: 0

Tracked records with valid factors, units, quantities, dates, and jurisdiction are included in emissions totals. Tracked records without valid factors, units, quantities, dates, or required jurisdiction are excluded from emissions totals and listed as records requiring review.

Tracked records included in emissions total: 1. Tracked records excluded from emissions total: 0. No imported activity records require review.

Data Quality Checks Requiring Review

Imported activity records requiring review: 0

Unreviewed source rows have not been promoted into ActivityData and are not counted as imported activity records requiring review.

Regulatory Threshold Reference

Regulatory threshold screening is not yet configured with reviewed source provenance for this jurisdiction.

Reviewed regulatory source provenance is required before threshold screening.

Threshold screening only. This does not constitute regulatory compliance advice.

Data Quality Summary

Tracked records included in emissions total: 1

Tracked records excluded from emissions total: 0

Imported activity records requiring review: 0

Unreviewed source rows have not been promoted into ActivityData and are not counted as imported activity records requiring review.

Methodology and Assumptions

Regulatory threshold screening is not yet configured with reviewed source provenance for this jurisdiction.

Reviewed regulatory source provenance is required before threshold screening.

Threshold screening only. This does not constitute regulatory compliance advice.

Emissions are calculated from imported or manually entered activity data and configured emission factors. CarbonLite applies factor matchin

Top Emissions Hotspot: Electricity

Records without valid factors, units, quantities, dates, or required jurisdiction are excluded from emissions totals and listed as records requir

Electricity contributes 89.64% of calculated emissions. Consider this category for reduction planning because it represents a large share

Source documents, source references, and factor metadata should be reviewed before using report outputs for internal, consultant, or extern

Electricity and Business Travel - Accommodation together represent 100% of calculated emissions.

This report was generated using CarbonLite Pilot Demo v0.1 for emissions data readiness and workflow review purposes only. It is not a cer

Top Emission Categories

Electricity		89.64%	519.40 kg CO2e
Business Travel - Accommodation		10.36%	60 kg CO2e

Appendix A: Imported Record-Level Source Evidence

Detailed record-level source evidence retained for imported activity records in this report scope. The main report body summarizes this information by sou

Appendix B: Source Rows Requiring Review

Source spreadsheet rows that remained unresolved after import review. These rows are not included in ActivityData or the GHG emissions total until corre
